No. S. B. of 1900.
553.

From

THE SURGEON-GENERAL WITH THE GOVERNMENT OF BOMBAY,
Bombay;

To

THE CHIEF SECRETARY TO GOVERNMENT,
General Department,
Bombay.

Bombay, 15th June 1900.

SIR,

I have the honour to forward, for the information of Government, the Annual Administration Report of the Lunatic Asylums of the Bombay Presidency for the year 1899.

2. The Public Works Department has carried out the usual repairs during the year under review.

3. *At Colába,* the cost of petty repairs to the buildings amounted to Rs. 3,975-7-0, as compared with Rs. 6,716-6-10 (exclusive of the cost of providing quarters for servants) in 1898.

4. *At Ratnágiri,* all the asylum buildings are in good order. The proposal for improving the urinals of the barracks is under consideration. Better accommodation is required for excited and noisy lunatics, as the existing cross-cell arrangement is insanitary and does not permit of proper supervision on the part of the warder on duty, especially at night.

5. No additions or alterations were made in the Poona Asylum buildings during the year, except the construction of two masonry tanks for the collection of waste water from the bathing places.

6. *At Dhárwár,* the yard in front of the solitary cells has been enclosed by a wall, in lieu of wooden railings over which patients had attempted to escape on two or three occasions. The latrines were fenced in with iron railings to prevent the escape of lunatics. The proposal for providing separate accommodation for criminal insanes and six quarters for warders has not yet been sanctioned, but it is hoped this will be done shortly.

7. The only alterations carried out in the Ahmedabad Lunatic Asylum during the year under report were the addition of iron-barred doors to six cells for dangerous lunatics. The improvement of the ventilation of the kitchen has not yet been carried out.

8. There were no additions or alterations made in the buildings of the Sir Cowasji Jehangir Lunatic Asylum at Hyderabad during the year 1899.

9. The water-supply at Colába during the whole year, with the exception of two days in the early part of November when there was a break in the main-pipe, was sufficient for the requirements of the institution, and the auxiliary tank was kept almost full as a small reserve. At other asylums the water-supply was good and ample, except at Rátnágiri and Hyderabad, where much of the garden ground had to be left untilled.

10. The undermentioned works were executed out of the discretionary grant at my disposal during the year 1899:—

	Rs.
Constructing two waste-water tanks at the Lunatic Asylum, Poona.	141
Replacing wooden railings in front of certain cells in the Dhárwár Asylum by a masonry wall	165
Total ...	306

11. On the statistical statements appended at the end of the report I beg to make the following remarks :—

Statement No. I shows that the total population of the asylums during the year under review was 1,114, showing an increase of 71 over the previous year. Of these, 902 were males and 212 females against 842 males and 201 females in 1898. On 1st January 1899 there remained 644 males and 167 females. During the year 241 males and 41 females were admitted and 17 males and 4 females readmitted; 72 males and 17 females were discharged cured; 121 males and 12 females were transferred to the care of friends (106 males and 8 females improved and 15 males and 4 females not improved), and two males discharged otherwise (1 escaped and 1 transferred from the non-criminal to the criminal class). The deaths comprised 77 males and 9 females as compared with 43 males and 12 females in the previous year. At the close of the year 1899 there remained 630 males and 174 females, total 804, against 811 (males 644 and females 167) in 1898. The daily average strength was 622·0 males and 173·0 females = 795·0, as compared with 786·9 (males 627·3 and females 159·6) in the preceding year.

The percentages of cures and deaths to the daily average strength were —

Cured	...	Males ...	... 11·6	Total	...	11·2
		Females ...	... 9·8			
Died	...	Males ...	... 12·4	Total	...	10·8
		Females ...	... 5·2			

The percentages to admissions were —

Cured	...	Males ...	... 27·9	Total	...	29·4
		Females ...	... 37·8			
Died	...	Males ...	... 29·8	Total	...	28·4
		Females ...	... 20·0			

There was one case of escape from the Colába Lunatic Asylum on the night of 17th July 1899. This man was a criminal lunatic who was sent on 27th June 1899 from the Ahmedabad Central Prison under sentence of transportation for life for murder. He was remarkable for the obstinacy with which he refused food, and had to be forcibly fed. He was from the very commencement under lock and key in a barred and bolted cell and gallery, and was never allowed into the grounds. It appears that, by leverage, he bent the bolt of the lock of his cell, reaching it easily through the bars of his door. He was thus free to enter the gallery where there are eight windows, all closed by vertical iron bars an inch in diameter. He bent one of these iron bars sufficiently to wrench it from its socket, and, once in the grounds, escape was easy owing to constructional facilities. A police investigation of the circumstances was made, but without any avail. Two night watchmen make the round of every part of the asylum every two hours—one for the European and the other for the native sides. Just outside the gallery where this insane was confined, and commanding a full view of it, are stationed nightly five warders who take it in turn to be on guard for two hours each, to give water, help epileptic insanes, keep order, and generally to exercise supervision. These men, it should be observed, have to take their turn of night watching in addition to duty by day.

On the night of 23rd August 1899 a criminal lunatic escaped from the Ahmedabad Lunatic Asylum, but was recaptured on the following day. The escape was traced to the insecurity of the door of his cell and the carelessness of the warder on duty; the former was remedied by the Public Works Department, and the warder was punished with a fine.

A non-criminal lunatic who escaped from the Hyderabad Lunatic Asylum on the 22nd October 1899 was recaptured on the 28th idem. After taking his meals at about 7 P.M. he was walking about in the open space near the ward. Finding a corner of the enclosure wall, which was about 7 feet high, easy of access, he climbed over it. The warders on duty were at the time engaged in distributing bedding, &c., to the patients.

Statement No. II gives details of criminal lunatics. On 1st January 1899 there remained 110 males and 9 females; 26 males and 2 females were admitted and 1 male was readmitted, making a total of 137 males and 11 females—a grand total of 148 in all confined, as compared with 142 (males 133 and females 9) in 1898. Of these, 20 males were discharged, transferred, &c., and 12 males

died, leaving 105 males and 11 females on 31st December 1899. The daily average strength of these insanes was 115·7 (males 105·4 and females 10·3) against 117·0 (males 108·0 and females 9.0) in the previous years.

Particulars of the different kinds of this class of insanes are given in the following table. I think it almost certain that a considerable number of those placed in the third category were insane at the time of their trial :—

Criminal Insanes.	Colába.	Ratnágiri.	Poona.	Dhárwár.	Ahmedabad.	Hyderabad (Sir Cowasji Jehangir).	Total.
Tried and acquitted on the ground of insanity	8	9	1	...	6	7	31
Insane on admission and found to be incapable of making their defence ...	34	15	4	10	16	16	95
Those who became insane during imprisonment	10	1	2	4	5	...	22
	52	25	7	14	27	23	148

Statement No. III shows the religion, sex and residence of the lunatics admitted during the year 1899. The total number of Christians admitted was 95, of whom 73 were Europeans, 5 Eurasians and 17 Native Christians. Hindus numbered 127, Mahomedans 63, and other castes 18. Of the 73 European insanes, 63 were soldiers (from Bombay 20, Bengal 22, Madras 11 and the Punjáb 10) and 10 civilians (9 from Bombay and 1 from Bengal).

Statement No. IV is a return showing the previous occupation of the insanes admitted during the year. European soldiers furnished the largest number of admissions, *viz.*, 63. Labourers numbered 28, domestic servants 24, merchants and traders 21, beggars and mendicants 20, clerks 17, and cultivators 16. In 24 cases the occupation was not ascertained, and 31 had no occupation.

Statement No. V treats of the ages of the insanes admitted according to sex. Under 20 there were 15 insanes (13 males and 2 females), between 20 and 40 there were 232 (198 males and 34 females), between 40 and 60 there were 54 (45 males and 9 females), and above 60 years 2 males.

Statement No. VI shows the various types of insanity with the result of the treatment of each form, and is summarized in the following table :—

	Remained.	Admitted.	Total.	Recovered.	Improved.	Died.
Idiocy	45	6	51	1	3	4
Mania, acute or chronic	406	174	580	54	51	44
Melancholia	155	68	223	18	33	20
Dementia, including acquired	196	33	229	14	20	14
Mental stupor	1	1	2	...	...	1
General paralysis of the insane ...	1	2	3	...	2	...
Delusional insanity	7	18	25	1	5	3
Declared to have recovered or not yet diagnosed	...	1	1	1	...	...
Total ...	811	303	1,114	89	114	86

Statement No. VII gives the alleged causes of insanity among the lunatics. Of the 1,114 insanes confined in the asylums during the year under review, a cause is given in 536 and is unknown in 578. Of the known causes, 415 are attributed to physical and 121 to moral causes. Of the former, the use of intoxicating drugs and abuse of spirits accounted for 143 cases, previous attacks 71, hereditary causes 37, fever and epilepsy 31 each, congenital diseases 24, masturbation 18, syphilis 12, injury to head 11, destitution 7, sunstroke, child birth and hypochondrical causes 5 each, sexual excess 4, climate 3, uterine disorder 2, and gout, mental trouble, venereal sore producing mental depression, fall followed by fever, paralysis and overwork 1 each.

The following are the causes, as far as they can be ascertained, leading to insanity in persons charged with crimes of violence :—

Ganja smoking ...	...	10	Fever	1
Epilepsy ...	...	7	Do. and persistent headache ...	1
Hereditary ...	...	5	Puerperal fever	1
Grief	...	4	Plague...	1
Spirit-drinking ...	...	3	Disappointment	1
Previous attacks ...	...	3	Anger	1
Religion... ...	...	3	Injury to head	1
Anxiety	...	2	Unknown	38

In the existing social state of the people of India, information regarding the previous habits of patients and the probable causes of their insanity must, in my opinion, continue to be very incomplete. Many patients are mendicants, of whom little is known; and in the cases of those whose relatives are accessible, it is often most difficult to obtain trustworthy particulars. Magistrates and Police Officers usually have the best opportunities of obtaining the histories of lunatics; but it would seem that either these are neglected, or inquiries into antecedents are neither closely nor intelligently pursued, or that the details are, for various reasons, unobtainable. The Superintendents of Asylums report that the information supplied by Medical Officers and Magistrates is often scanty and defective; but as regards the first-mentioned officials, they are in most instances largely dependent upon the Judicial and Police Officers for the required histories. I have now taken steps with a view to secure, in the future, as full and accurate information as may be possible. As regards Indian hemp, I still maintain the opinion that it is a not unfrequent cause of insanity which, in the earlier attacks, takes the form of transient mania.

Statement No. VIII is a return of the sick in the asylum hospitals (for diseases other than insanity) with the results:—On 1st January 1899 there remained 29 patients under treatment and 429 were admitted, giving a total of 458 as compared with 512 in the previous year. Of these, 332 were cured, 8 discharged otherwise (7 were made over to the care of their friends, and in one case the disease was changed), and 86 died, leaving 32 on the sick roll at the end of the year 1899. The daily average of sick was 37·4 (males 26·2 and females 11·2) against 41·2 (males 30·3 and females 10·9) in 1898.

Ague, dysentery, debility, phthisis, diarrhœa, abscesses, spasmodic asthma, epilepsy and Bright's disease were the chief causes of admission. The following table shows the principal diseases for which the patients were treated as compared with the previous year. There was a considerable decrease in the numbers of cases of fever, anæmia, debility, diarrhœa and injuries; but a decided increase occurred in the admissions for pneumonia, phthisis, dysentery and Bright's disease. In the Dhárwár Asylum 3 inmates, of whom one died, were attacked with cholera; and at Poona 2 patients died of plague. In this asylum 103 of the inmates (daily average 100·9) were inoculated with Haffkine's prophylactic. The results of these inoculations and of others performed among the servants and their families have been separately reported to Government:—

		Fevers.			Anæmia.			Debility.			Pneumonia.			Dysentery.			Diarrhœa.

* Suicidal hanging.

There was a considerable decrease in the total admissions for malarial fevers, and only one death was attributed to this cause. This occurred without any special change in the system of administering the alkaloids of cinchona, which were as usual given during the rains and cold season to patients with a tendency to periodic fever. But in the asylums of this Presidency there are no severe fevers of this kind, which only prevail in certain unhealthy localities; and it is always a matter of doubt what proportion of the cases registered as malarial are really of that nature. The appearance of the patients, the mortality returns, and the pathological conditions found in such of the fatal cases as are examined, negative the supposition of the prevalence of malarial fevers among the insanes to any important extent.

The percentages of the daily average sick to the daily average population, as compared with the previous year, were—

		Percentage of daily average sick to the daily average population.		
		Male.	Female.	Total.
Colába	1899	6·7	7·9	7·0
	1898	7·8	8·7	8·0

	1898	3·0	2·1	2·8
Ahmedabad	1899	1·9	3·4	2·1
	1898	2·0	6·8	2·6
Hyderabad (Sir Cowasji Jehangir) ...	1899	2·6	4·4	2·8
	1898	3·1	5·0	3·2
Total ...	1899	4·2	6·5	4·7
	1898	4·8	6·8	5·2

Of the 86 deaths which occurred during the year, dysentery is credited with 20, phthisis 18, Bright's disease 8, debility 6, pneumonia 7, epilepsy, diarrhœa and valvular disease of the heart 3 each, fatty degeneration of the heart, anæmia, bronchitis and plague 2 each, and enteric fever, cholera, ague, paralysis, spasmodic asthma, albuminuria, cirrhosis of the liver, peritonitis, heat apoplexy and exhaustion 1 each.

The following table gives the ratio of deaths per mille of the average daily strength, and the total population of each of the asylums, as compared with that of the previous year :—

		Average daily strength.	Total population.	Number of deaths.	Ratio of deaths per mille to	
					Average daily strength.	Total population.
Colába	1899 ...	315·0	507	53	168·2	104·5
	1898 ...	311·3	459	27	86·7	58·8
Ratnágiri	1899 ...	102·7	121	3	29·2	24·8
	1898 ...	94·8	109	4	42·2	36·7
Poona	1899 ...	100·9	143	11	109·0	76·9
	1898 ...	105·7	142	10	94·6	70·4
Dhárwár	1899 ...	58·7	77	7	119·3	90·9
	1898 ...	60·0	73	5	83·3	68·5
Ahmedabad	1899 ...	109·1	128	5	45·8	39·1
	1898 ...	107·1	121	2	18·7	16·5
Hyderabad (Sir Cowasji Jehangir)	1899 ...	103·6	138	7	64·5	50·7
	1898 ...	108·0	139	7	64·8	50·4
Total ...	1899 ...	795·0	1,114	86	108·2	77·2
	1898 ...	786·9	1,043	55	69·9	52·7

From the above table it will be seen that at the Colába, Dhárwár and Ahmedabad Asylums the death-rates per mille were much higher than in the previous year, though at Colába and Dhárwár they were nearly the same as in the year 1897.

At Colába there were 53 deaths (6 Europeans and 47 Natives), as compared with 27 (2 Europeans and 25 Natives) in 1898, giving a ratio of 104·5 deaths per mille of the total population against 58·8 in the previous year. The mean mortality of the preceding 10 years was 88 per mille of population, and during three of those years the ratio of the year under report was exceeded. Phthisis, dysentery and Bright's disease accounted for 17, 15 and 8 deaths, respectively. The mortality among the Europeans was at the rate of 53·6 per mille of the total population, as compared with 26·3 in 1898, and was due to phthisis 2, and epilepsy, Bright's disease, diarrhœa and typhoid fever 1 each. Among the natives there was a death-rate of 119·0 per mille of the total population against 65·3 in the previous year, the principal causes being dysentery, phthisis and Bright's disease. Three patients were found on admission into the asylum to be suffering from advanced diseases, *viz.*, peritonitis, dysentery and chronic phthisis, and died within a few days. The rise in the death-rate was, in the Superintendent's opinion, mainly due to the remarkably abnormal and unhealthy weather.

In reply to my inquiries the Superintendent reports that no post-mortem examinations were made, because there was no obscurity suspected about the correctness of the diagnosis, and I have referred him to paragraph 15 of the letter to Government accompanying my Administration Report for the year 1898.

The number of deaths in the Ratnágiri Asylum was 3 against 4 in 1898, and the ratio of deaths per mille of the total population 24·8 against 36·7

in the previous year. The causes were epilepsy, dysentery and exhaustion. The fatal case of epilepsy was that of a male, aged 35, who, on admission to the asylum on 9th June 1898 for delusional insanity with epilepsy, was in a feeble state of health, and had suffered from sunstroke prior to the present attack which was stated to be of six weeks' duration. At 4 A.M. on the 24th January 1899, the patient, who had appeared well on the previous day, was heard moaning, and the Hospital Assistant was sent for. Up to 7 P.M. of the same day he had ten fits at irregular intervals; and although under the use of bromides and cannabis indica the violence of the fits was lessened, they ended in coma from serous effusion, and death occurred on 31st January. The patient who died of exhaustion was admitted into the asylum for acute mania on 13th December 1898 in a fair state of health. She had what is described as a chronic occipital hæmatocele, and was restless, noisy, violent, indecent and dirty in her habits. The tumour on her occiput gradually increased to the size of an orange without any febrile symptoms, and on the morning of the 5th March 1899, owing to her incessant raving, she was addmitted into the asylum hospital, where she was quite unmanageable and refused to take her food. On the 8th March she was very exhausted and the hæmatocele had burst, discharging blood and pus, and the case terminated fatally from exhaustion on the 11th March 1899. The Superintendent gives no opinion on the nature of the tumour on the head, nor does he state whether there existed any history or signs of syphilis. The case of dysentery came into the asylum for dementia on 12th April 1890. He was morose and given to stealing, and used to steal fruits and vegetables from the asylum garden and eat the latter uncooked. On the 29th March 1899 he suffered from vomiting and pain in the abdomen, and was placed on the sick list. He passed round worms per rectum and in his vomit on various occasions, and their appearance was followed by acute dysentery which ended fatally on the 2nd April 1899.

At Poona there were 11 deaths against 10 in 1898. The ratio of deaths per mille of the total population was 76·9 as compared with 70·4 in the previous year. The mortality was due to debility 3, pneumonia 4, plague 2, and dysentery and albuminuria 1 each. The patient with albuminuria was admitted into the asylum on 16th June 1892 for acute mania, and, though not of a robust constitution, had not been in hospital until admitted on 10th January 1898. He then remained permanently on the sick list up to his death. On transfer to the hospital he was in a weak and debilitated condition, with face and legs swollen, the urine diminished in quantity and containing albumen. He steadily got worse and died on 6th February 1899. The post-mortem examination showed the membranes and substance of the brain to be pale in appearance. The ventricles of the brain contained some serous fluid. No abnormal growth was seen. The brain weighed 44½ ozs; the right lung was solidified in its upper third, its lower two-thirds and the whole of the left lung was markedly congested, both the lungs weighing 44 ozs. The heart was pale; its valves were normal; the kidneys were pale in appearance and weighed 8 ozs.; the liver and spleen were pale, and the former had undergone marked fatty degeneration. One death from pneumonia was that of an epileptic patient, who entered the asylum on 22nd January 1896 as a criminal lunatic and was transferred to the non-criminal class on the 31st idem. On admission he was suffering from severe epileptic fits, and on 16th October 1896 it was considered advisable to permanently transfer him to the sick list, on which he remained until his death. On 11th February 1899 he had high fever with dulness over the upper lobe of right lung, and in the left lung crepitant râles, and the case terminated fatally on 13th idem. At the post-mortem examination it was found that the body was fairly nourished; membranes of the brain somewhat congested; the brain congested and weighed 41 ozs.; its ventricles contained some serous fluid but no abnormal growth. The right lung was consolidated by red hepatization at its upper two-thirds and weighed 29 ozs; the left lung congested and weighed 13 ozs. The heart was normal, and the liver, spleen and other abdominal organs presented nothing remarkable. Another fatal case of pneumonia was, on admission into the asylum for melancholia on 19th April 1899, reported to be in a debilitated state owing to repeated attacks of bronchitis, &c., which had undermined his constitution. Though not actually placed on the sick list until 10th January 1899, he had now and then been

treated with cough mixtures and tonics, but gradually lost flesh and died on 4th February 1899. The post-mortem examination showed congestion of the brain and its membranes and some serous fluid in the cavity of the arachnoid. No abnormal growth was seen in or around the brain which weighed 40 ozs. The right lung was quite solidified in its whole extent and was of a greyish colour, and on cutting into it some purulent fluid exuded. The left lung was partially consolidated and of a dark reddish colour. The heart, liver, and spleen were normal, and the kidneys congested. The third death from pneumonia was that of a male insane, Vithal Ramchander, admitted into the asylum in a very feeble condition on the 30th June 1899 for chronic mania with epilepsy. He was inoculated for plague on 10th July, and, having fever, was transferred to the sick list on the 22nd July and died of pneumonia on the 3rd August 1899. Post-mortem examination showed consolidation of the left lung and peritoneal effusion, but no glandular enlargements. Brain weighed 40 ozs. The fourth fatal case of pneumonia was that of Nursu Amruta, admitted into the asylum on the 18th November 1891 for idiocy. He was inoculated for plague on the 10th July 1899, attacked with pneumonia on the 22nd, and died on the 24th idem. The post-mortem examination showed :—rigor mortis well marked, no enlargement of glands, the heart pale and small with much fat on its surface and clots in the cavities, base of left lung much consolidated, liver, spleen and kidneys normal, brain weighed 40 ozs., dura mater very adherent to vault of skull, no tumour or other abnormality. Of the three insanes who died of debility, one, admitted into the asylum on 14th June 1896 for acute mania, was soon after placed on sick list. Owing to derangement of his digestive system, he was unable to properly assimilate his food, and hence liable to frequent slight attacks of diarrhœa which gradually impaired his health. Later on he persistently refused food, and died from exhaustion on 11th February 1899. The post-mortem examination showed emaciation. The brain weighed 41 ozs. There was paleness of its membranes with some congestion and softening of its substance and serous fluid in the ventricles, but no abnormal growth; lungs somewhat congested; heart, liver and spleen pale; stomach and intestines anæmic, and the kidneys congested. The second case came into the asylum on 7th May 1898 for melancholia and was in a weak state on admission, and though not placed on the sick list until 14th May 1899, he had been treated with extra nourishment. He had daily fever, became greatly emaciated and sank on 3rd June 1899. The third fatal case of debility was, on admission into the asylum on 13th August 1899 for melancholia (chronic), returned as "in a bad state of health." He declined food, swelling and œdema of the face and legs supervened, and he died on 18th December 1899. The death from dysentery was in an insane who entered the asylum for acute mania on 13th April 1895 in a debilitated condition. She was admitted into the hospital for acute dysentery on 11th October 1899, and died on 9th December 1899. No post-mortem examination made in the three above-noted cases. Of the two cases of plague, Bhondia Rama was admitted into the asylum on 4th October 1889 for acute mania in a fair state of health. On 26th August 1899 he was suddenly attacked with fever, temperature 105·2°. Signs of pneumonia set in, but no enlarged glands were found in any part of his body. He was transferred to the General Plague Hospital, where he died of pneumonic plague on 28th August. He had been inoculated for plague on 1st July, 56 days before death. The second fatal case of plague was that of a woman, name unknown, who came into the asylum for acute dementia on 24th February 1889, and was reported to be in fair health. She was attacked with fever, temperature 104°, on 18th September 1899, and a bubo was found in her right axilla. She was transferred to the General Plague Hospital, where she died on 23rd September. She had been twice inoculated for plague, *viz.*, on the 29th July and 31st August 1899.

The Dhárwár Asylum shows an increase of 2 deaths over the previous year, *viz.*, 7 against 5, giving a ratio of 90·9 deaths per mille of the total population, as compared with 68·5 in 1898. The causes were pneumonia, anæmia, acute bronchitis, cholera, general debility, fatty degeneration of the heart and cirrhosis of liver. The fatal case of pneumonia was that of a man of very poor physique who came into the asylum on 5th May 1898 for acute mania. He was subject to periodical fits of excitement, destroyed his clothing and often remained naked. He apparently got chilled from this exposure in the

damp weather, for on the evening of 6th April 1899 he had a temperature of 103·2°. He refused to eat his food or take medicine, but rolled about his cell in a violent manner and threw off his clothing. Next morning, consolidation of the bases of both lungs with crepitation was detected, and on the 9th idem he died. The second case was that of a weak, anæmic man with œdematous extremities who was admitted into the asylum on 5th May 1898. He was subject to frequent fits of excitement, dirty in his habits, and constantly exposed himself. He gradually lost flesh, and on 14th March 1899 was transferred to the sick list. The heart's action was very weak; there was no enlargement of spleen or liver. The urine was pale and scanty; specific gravity 1010; no albumen; mucous membranes pale and anæmic; bowels irregular; stools loose and at times passed involuntarily. He refused nourishment and medicine, and constantly threw off his clothing. General anasarca supervened, and he died on 17th April 1899. The fatal case of bronchitis was that of a middle-aged man who came into the asylum on 12th January 1897. He had been very violent for some months, but latterly he grew quiet and morose, and frequently refused to take his food. On 10th April 1899 he was admitted into the asylum hospital for fever and chills, his pulse being feeble and tongue dry, &c. The next day signs of acute bronchitis developed with congestion of bases of both lungs; cough was attended with frothy expectoration, and, in spite of every care and attention, he gradually grew weaker and died on the morning of 19th idem from exhaustion. The patient who died from cholera was, on admission to the asylum on 4th July 1889, reported to be in a very poor state of health. On 2nd May 1899, at about 4 P.M., he was suddenly attacked with violent purging followed in half an hour by collapse with whispering voice, imperceptible pulse and involuntary rice-water evacuations. There were neither vomiting nor cramps, but the urine is said to have been suppressed. He had no reaction, and succumbed within four hours. The fifth death (debility) was that of a woman aged 81, who had been confined in the asylum since July 1875. During the last six months she was subject to frequent attacks of intermittent fever, and suffered from anasarca and a gangrenous ulcer on one of the legs. For over a month she took little or no food, was excessively emaciated, almost pulseless, and lay in a torpid condition from which she could hardly ever be aroused. She died on 14th May 1899. The sixth fatal case had been in the asylum for five years. Her general health was fair; but she was most excitable, restless and loquacious. She was attacked on the 4th June 1899 with violent vomiting; but there were neither purging, nor suppression of urine or cramps. The vomit consisted of bilious fluid containing several round worms. Sudden and extreme collapse ensued, with cold extremities, whispering voice and imperceptible pulse, and she succumbed at 6-15 P.M. of the 6th June. The post-mortem examination revealed fatty degeneration of heart; its semi-lunar valves were encrusted and incompetent, and a large antemortem clot was found in the right ventricle. The stomach and intestines were normal, but the jejunum was blocked by a coil of round worms which may have given rise to the severe vomiting. The brain is reported to have been normal. The seventh death was that of an elderly man who came into the asylum for acute mania on 21st June 1899. He was very restless, violent, destructive, and dirty in habits, and latterly declined to take any nourishment. He was greatly emaciated; the conjunctivæ were tinged yellow, the liver was contracted, and the spleen enlarged. He was admitted into the asylum hospital on 20th July, as, in adition to his refusal of food, he had wandering delirium, which eventually terminated in coma and death on the 24th July. The post-mortem examination revealed contraction and fibrosis of the liver, which was of yellow colour; the spleen was enlarged, and there were petechiæ in the mucous membrane of the intestines, the lower portion of which was distended with dark coffee-coloured pultaceous matter. The other organs were normal.

The Ahmedabad Lunatic Asylum returned 5 deaths against 2 in 1898, and the ratio of deaths per mille of the total population was 39·1 as compared with 16·5 in the previous year. Dysentery accounted for two deaths, and anæmia, pneumonia and phthisis for one each. Of the two deaths from dysentery, one was in an old man of 55 years who was an inmate of the asylum for over six years; his habits were very filthy, and latterly he suffered from dysentery which did not yield to treatment. He gradually wasted, and died after having been under

treatment for nearly three months. Another old man of 61, a criminal lunatic of over 15 years' residence in the asylum, who suffered from dysentery, persistently refused nourishment and died from exhaustion thirteen days after his admission into the asylum hospital. The case of anæmia was that of an old man of weak constitution. During his nine months' residence in the asylum he suffered from continued maniacal excitement, gradually lost flesh and weight, and latterly became very anæmic. He eventually died from extreme weakness. The death from pneumonia was in an insane, aged 64, who was an inmate of the asylum for over 31 years. He was attacked with pneumonia and died five days after his admission into the asylum hospital. The insane who died from chronic phthisis had been a resident of the asylum for over 25 years. He was on the sick list forty days before his death.

At the Hyderabad Lunatic Asylum there were 7 deaths, or the same as in the year 1898, the ratio of deaths per mille of the total population being 50·7 against 50·4 in the previous year. Dysentery, debility, diarrhœa, bronchitis, pneumonia, ague and heat apoplexy accounted for the mortality. The fatal case of dysentery was that of a man sent from Baluchistan, who was found on admission to be suffering from scorbutic dysentery for which he was treated in the asylum hospital. There was a slight improvement in his general condition for a short time, but he had recurrent attacks of fever and dysentery from which he died on 2nd January 1899. The death from debility occurred in a man aged about 60 years, who, before his admission into the asylum on 9th December 1897, suffered from paralysis agitans. He was extremely weak and emaciated, and succumbed on 4th January 1899. The patient who died from diarrhœa on 4th October 1899 was an old man confined in the asylum since 1875. The death from bronchitis was that of an old man admitted into the asylum on the 23rd August 1899. On the 10th November he refused food and medicines and exposed himself to cold at night. The fatal case of pneumonia was that of a man who entered the asylum in an emaciated condition on 6th August 1899. His habits were dirty, he remained naked and ate rubbish. He became ill on the 26th October, and died on 21st November. The woman who died from ague entered the asylum on the 29th December 1897, and frequently suffered from fever. Being attacked with this disease on the 25th September, and refusing food, she died from exhaustion on the 10th October. The seventh death, which is attributed to heat apoplexy, was that of an elderly man, of filthy and destructive habits, who came into the asylum on the 9th April 1896. On the 4th September 1899 he suddenly became insensible with a high temperature, and died in about half an hour. Post-mortem examination showed congestion of the brain with pericardial effusion and a feeble muscular tissue of the heart.

Three major injuries are reported. A case of fracture of the neck of the femur, caused by tripping over a curb-stone, was treated in the Ratnágiri Asylum; the patient, who was aged and weakly, recovered with a shortened limb.

The case of sprained ankle in the Dhárwár Asylum was that of a criminal lunatic pronounced sane by the visitors' committee, and ordered by Government to be sent for trial on 14th December 1899. While working in the asylum garden, he suddenly ran to the well and jumped into it. He was soon rescued by means of a moat, and he confessed that it was to avoid the disgrace of punishment that he attempted suicide.

At the Sir Cowasji Jehangir Lunatic Asylum, Hyderabad, whilst a patient was working in the kitchen, an iron bucket full of water slipped from his hand and fell on his right foot, causing a compound fracture of the phalanges of the great toe.

Statement No. IX is the cash account of the asylums for the year 1899. The total income was Rs. 1,51,866-11-11. Of this sum, Rs. 1,22,022-14-2 were received from the treasury, Rs. 17,380-2-11 from paying patients, Rs. 3,056-1-0 from the manufacturing departments, being the value at market rates, less cost of raw materials, of articles supplied to the asylums and sold to the public together with the labour of lunatics for grinding grain; and Rs. 8,664-11-1 were "book receipts" on account of work done by the Public Works Department and the supply of Europe stores, printed forms and stationery. The corresponding figures for the previous year were Rs. 1,22,012-9-0, Rs. 14,436-4-2, Rs. 2,726-3-10 and Rs. 12,897-6-7. Miscellaneous receipts amounted to Rs. 742-14-9 as compared with Rs. 220-8-6 in 1898.

The total expenditure amounted to Rs. 1,51,866-11-11 against Rs. 1,52,293-0-1 in 1898. The establishment cost Rs. 46,264-3-8, the increase of Rs. 3,305-9-0 over the previous year being due to the employment of a whole-time Superintendent at the Colába Lunatic Asylum except for three months during the year 1899. Rs. 60,435-6-0 were expended on diets, or Rs. 3,369-0-11 less than in 1898. There is an increase of Rs. 322-13-1 and Rs. 258-13-8, respectively, in the charges for "Contingencies" and "Clothing and Bedding," due to the purchase of new articles at Poona, Ratnágiri, Dhárwár and Ahmedabad Asylums; whereas medicines show a decrease of Rs. 492-6-4 over the previous year.

If the amounts of Rs. 17,380-2-11 received from paying patients, Rs. 1,070-2-1 on account of the sale of manufactured goods to the public and labour of lunatics, Rs. 1,985-14-11 made over to the asylums for asylum purposes, and Rs. 742-14-9 got from miscellaneous sources, total Rs. 21,179-2-8, be deducted from the amounts received from the treasury and adjusted to Government as "Book Receipts," the net cost to Government was Rs. 1,09,508-6-7 against Rs. 1,17,526-15-1 in 1898, and the net cost per head of daily average strength Rs. 137-11-11 as compared with Rs. 149-5-8 in the previous year.

The abstract of the cash account required by the Government of India is given below.

	Daily average strength in 1899.	Establishment.		Diet.		Clothing and Bedding.

Total ...	1,393 0 4	1 12 0	10,052 7 2	12 10 4	1,25,013 3 3	157 4 0

From this it will be seen that there is a decrease in the cost of diets per head of daily average strength, as compared with the previous year, in all the asylums; but the total cost per head at different asylums varied according to the class of patients and the prices of food stuffs in the districts in which they are situated. The asylums at Ratnágiri and Poona show an increase in the cost of "Clothing and Bedding" per head of daily average strength, due to the purchase of new articles to replace old ones. Excepting at Dhárwár, there is a decrease in the cost of "Medicines" per head of daily average strength. The

variations under this head depend largely on the timely adjustment by the Accounts Department of the amount of medical stores issued to charges by the Medical Store Depôt; and the above abstract shows that the value of medicines, &c., supplied to the Ratnágiri and Poona Asylums during the latter portion of the year 1899 was not brought to account before the close of the year. The increase in the cost of "Contingencies" per head of daily average strength at Poona, Dhárwár and Ahmedabad is due partly to the replacement of old and worn out articles of contingencies.

Statement No. X is a return of the sanctioned establishment as it stood on 31st December 1899. The monthly cost was Rs. 3,892-8-0 against Rs. 4,094-8-0 in 1898.

Statement No. XI gives receipts and expenditure of the manufacturing department. The total credits amounted to Rs. 3,697-8-6 and debits to Rs. 2,312-2-3, giving a profit of Rs. 1,385-6-3 against Rs. 1,114-15-9 in the previous year. The average number of insanes employed during the year was 328·9 (males 267·0 and females 61·9) against 359·4 (males 291·3 and females 68·1) in 1898. In calculating the percentage of the lunatics employed, those used as supplementary servants of the asylums, *i.e.*, for works other than manufactures, have also been included in this statement, but the estimated value of their labour has not been taken into account.

In this connection I beg to state, for the information of Government, that the importance of finding work for the lunatics is recognised. A large number of the patients are unfit for steady or profitable labour; and there is not only much difficulty in providing suitable occupation, but in some instances a want of skilled supervisors. At Colába lunatics who are willing to be engaged in some occupation are allowed to work in the factory attached to the asylum or on extramural work, but the European and Eurasian inmates have little suitable occupation in which they can be employed. In other asylums of this Presidency, gardening and cultivation are the chief occupations of those who are willing to work. The female inmates are, for the most part, employed in grinding corn. The unruly insanes are, as much as possible, induced to work by the knowledge that they will not otherwise be allowed to share in the diversions and other inducements provided. These consist in musical instruments, games, books, papers, periodicals, &c.; and native musicians are also occasionally engaged on the principal holidays, when extra diet, sweetmeats, &c., are supplied to the inmates and are much appreciated. The sum expended for the recreation and amusements of the inmates during the year under review was Rs. 1,380 as compared with Rs. 1,460 in 1898.

Without considerable expenditure and a more intelligent staff of attendants, it will not, in my opinion, be possible to largely increase remunerative work in the asylums of this Presidency. Few of the patients are fit for such occupation, but if suitable establishments and plant were provided, milch cattle might be kept and dairies opened at a few of the asylums, though they would have to compete with other dairy farms which now exist in most of the larger towns.

The question of diminishing restraint receives as much attention as possible from Superintendents; but I agree with these officers in their opinion that, until a more educated and intelligent class of persons is attracted to asylum service by improved pay, there can be but little advance in the details of managing our insanes. The present wages of the attendants are those of the ordinary labourer, and consequently the warders are scarcely above this class. In the case of the majority of insanes of this country, I believe that confinement within enclosures is necessitated not only by the want of capacity and attentiveness on the part of the warders, but by their own low intelligence which renders a large proportion of the cases unmanageable and unimproveable. So that, whilst I acknowledge that the confinement of the patients as a whole can be made less irksome by structural improvements including more spacious exercise yards, and by a more capable staff of attendants, I am unable to admit that excessive restraint is now imposed on refractory individuals or that the liberty of the general body of inmates is seriously restricted in the asylums of this Presidency.

Statement No. XII gives the condition of the insanes as to caste, sex and marriage, and is summarized in the following table :—

Table I.

Statement No XIII gives particulars regarding criminal lunatics. Their crimes were theft 31, culpable homicide amounting to murder 53, culpable homicide not amounting to murder 9, attempt at suicide 3, voluntarily causing grievious hurt 15, house-breaking 10, mischief and assault 8, and miscellaneous offences 19. Of the average strength of 115·7 (males 105·4 and females 10·3), 51·3 males and 6·7 females, total 58·0, were employed, against 57·2 (males 49·9 and females 7·3) in 1898.

12. The official visitors were regular in their attendance at all the asylums, except that in March and July 1899 the Second Presidency Magistrate was absent from the meeting at Colába and gave no timely intimation, nor was a substitute provided as required by Government Resolution No. 104, dated 12th January 1874, General Department. In August 1899 also the Third Presidency Magistrate was unavoidably absent from the same institution, owing to his not having taken complete charge of his duties.

At Ahmedabad in the month of January 1899, the Sessions Judge, the Senior Military Medical Officer and the District Superintendent of Police failed to attend the meeting or to provide substitutes during their absence.

13. On the 23rd December 1899 the Sir Cawasji Jehangir Lunatic Asylum at Hyderabad was inspected by the Principal Medical Officer, Sind District, Karáchi, who has reported favourably on its condition and management.

14. On October 30th, 1899, I inspected the asylum at Poona, which was clean and well managed. But, as previously reported, the buildings are in several respects unsuitable.

On December 6th, 1899, I visited the Colába Asylum, which was clean and efficiently supervised; but, as I observed last year, the arrangement of the buildings does not permit of proper grouping of the different forms of insanity, or of the complete separation of noisy or violent patients.

On January 13th, 1900, I inspected the asylum at Ahmedabad with the state of which I was well satisfied. The defects in the buildings which I reported last year still exist, and I noticed that an additional door, or a screen, was required in order more completely to shut off the men's from the women's yard.

On March 21st, 1900, I inspected the asylum at Dhárwár, which was in very good order. The buildings are good, but are rather crowded together; and the women's exercise yard is too small. I also noted the necessity of two more cells for women and of improvements to the mortuary, with other minor needs. Separate accommodation for criminals is desirable, and juveniles should not be so much in association with noisy and violent adults.

I was unable to visit the asylum at Ratnágiri during the past touring season.

The management of the asylums by Superintendents was, on the whole, satisfactory; and the conduct of the Hospital Assistants and servants was good. But I have again to notice a certain want of completeness in the medical histories of cases recorded in some of the reports.

I have the honour to be,

Sir,

Your most obedient Servant,

G. BAINBRIDGE, M.D.,

Surgeon-General with the Government of Bombay.

STATEMENT No. I.

ANNUAL STATEMENT No. I.

Showing separately the Admissions, Discharges, &c., &c., of Lunatics in the Lunatic Asylums of the Bombay Presidency during the year 1899 and ten previous years.
